## INTRODUCTION

Final figures from the 1976 Census are presented in this report to show numerical and percentage distributions of the population into four broad groups of mother tongue (see definition below) — English, French, All other and Not stated.

Comparative 1971 and 1976 data are shown for Canada, the provinces and territories in Table 8. Historical comparisons between 1971 and 1976 data are affected by the retention of the "Not stated" category in 1976. In 1971, if a mother tongue was not given by the respondent, one was assigned during processing. The effect of this assignment was to increase the size of all language groups. Table 9 shows the census divisions and subdivisions (i.e., rural municipalities, incorporated cities, towns, villages, etc.) and the federal electoral districts are shown in Table 10.

This report updates figures from a comparable report of the 1971 Census (SP-3, Catalogue No. 92-773) whose main function was to provide data to meet the terms of the Official Languages Act of July 1969. This Act provides for the establishment of bilingual districts in Canada, based on mother tongue figures as determined by each decennial census. These mother tongue data are designed specifically to assist the Bilingual Districts Advisory Board in making recommendations for the establishment of such districts. To that end it designates (with an asterisk) those subdivisions or federal electoral districts where both official languages are reported as mother tongue and where the minority official language reported as mother tongue is 10% or more of the total population.

Where applicable, relevant parts of the Census questionnaire and instructions are reproduced in the Introduction to Volume 2 (Catalogue No. 92-820).

### DEFINITIONS

**Mother Tongue:** The language first learned and still understood. Infants who have not yet learned to speak are considered to have as mother tongue the language most often spoken in the home.

**Federal Electoral District (FED):** Any territorial unit entitled to return a member to serve in the House of Commons.

**Census Division (CD):** General term applying to counties, regional districts, regional municipalities, etc. In Newfoundland, Manitoba, Saskatchewan and Alberta, the term describes geostatistical areas that have been created by Statistics Canada in co-operation with the province as an equivalent for counties.

**Census Subdivision (CSD):** General term applying to municipalities, Indian Reserves, unorganized territories and subdivisions. In Newfoundland, Nova Scotia and British Columbia, the term also describes geostatistical areas that have been created by Statistics Canada in co-operation with the province as an equivalent for municipalities. It should be noted that the parts of Flin Flon falling in Manitoba and Saskatchewan, and the parts of Lloydminster falling in Saskatchewan and Alberta are treated as separate CSDs.

Les chiffres définitifs du recensement de 1976 présentés dans ce bulletin indiquent les répartitions numérique et en pourcentage de la population en quatre grands groupes de langue maternelle (voir la définition ci-dessous) — anglais, français, autres et non déclarée.

Le tableau 8 renferme les chiffres comparatifs de 1971 et 1976 pour le Canada, les provinces et les territoires. La retenue de la catégorie "Non déclaré" en 1976 a modifié les comparaisons chronologiques des données de 1971 avec celles de 1976. En 1971, lorsque le répondant n'avait pas indiqué de langue maternelle, on lui en assignait une lors du dépouillement. Cette assignation a eu pour effet d'accroître la taille de tous les groupes linguistiques. Le tableau 9 porte sur les divisions et les subdivisions de recensement (c.-à-d. les municipalités rurales, les cités, villes et villages constitués, etc.) et le tableau 10, sur les circonscriptions électorales fédérales.

Le présent bulletin constitue une mise à jour des chiffres d'un bulletin comparable du recensement de 1971 (SP-3, n° 92-773 au catalogue) qui avait pour objet premier de fournir des données conformément à la Loi sur les langues officielles de juillet 1969. Cette loi prévoit l'établissement de districts bilingues au Canada, en se fondant sur les chiffres relatifs à la langue maternelle qui sont établis lors des recensements décennaux. Ces données sur la langue maternelle sont expressément destinées à aider le Conseil consultatif des districts bilingues à faire des recommandations en vue de la création de ce genre de districts. À cette fin, il désigne (par un astérisque) les subdivisions ou circonscriptions électorales fédérales où les deux langues officielles sont déclarées comme langue maternelle et où 10 % ou plus de la population totale ont déclaré comme langue maternelle la langue officielle minoritaire.

Au besoin, certaines parties du questionnaire du recensement et des instructions ont été insérées dans l'Introduction au volume 2 (n° 92-820 au catalogue).

### DÉFINITIONS

**Langue maternelle:** Première langue apprise et encore comprise. Dans le cas des enfants en bas âge, la langue maternelle est la langue la plus souvent parlée à la maison.

**Circonscription électorale fédérale (CÉF):** Toute division territoriale élisant un député à la Chambre des communes.

**Division de recensement (DR):** Terme générique qui désigne les comtés, les districts régionaux, les municipalités régionales, etc. À Terre-Neuve, au Manitoba, en Saskatchewan et en Alberta, l'expression désigne les unités géostatistiques créées comme équivalent des comtés et délimitées par Statistique Canada en collaboration avec les provinces.

**Subdivision de recensement (SDR):** Terme générique désignant les municipalités, les réserves indiennes, les territoires non municipalisés et les subdivisions de recensement. À Terre-Neuve, en Nouvelle-Écosse et en Colombie-Britannique, l'expression désigne également des unités géostatistiques créées comme équivalent des municipalités et délimitées par Statistique Canada en collaboration avec la province. Il est à noter que les parties de Flin Flon qui se trouvent au Manitoba et en Saskatchewan, et celles de Lloydminster qui se trouvent en Saskatchewan et en Alberta sont considérées comme des subdivisions de recensement distinctes.

**DEFINITIONS — Concluded**

**Census Subdivision Type:** Census subdivisions (CSDs) are classified into various types, according to official designations adopted by provincial or federal authorities. With the exception of unorganized territories and Indian Reserves, the type indicates the municipal status of the CSD. The following list indicates the abbreviations used for the most common CSD types:

BOR	Borough
C	City — Cité
DM	District Municipality — Municipalité de district
HAM	Hamlet — Hameau
ID	Improvement District — District d'amélioration
IR	Indian Reserve — Réserve indienne
LGC	Local Government Community — Centre d'administration locale
LGD	Local Government District — District d'administration locale
LID	Local Improvement District — District d'amélioration locale
MD	Municipal District — District municipal
MUN	Municipality — Municipalité
PAR	Parish — Paroisse
RD	Rural District — District rural
RM	Rural Municipality — Municipalité rurale
SV	Summer Village — Village d'été
TM	Township Municipality — Municipalité de township
T-V	Town — Ville
V/C	Ville/Cité
VL	Village

**Indian Reserve:** Territory, mostly rural and varying in size, that belongs to an Indian tribe according to treaties between the Federal Government and the Indians. It is excluded from local jurisdiction and administered by the Federal Department of Indian and Northern Affairs.

**Unorganized Territory:** An area without municipal organization, directly administered by the province or, when applicable, by the county. Such areas are generally characterized by large tracts of land with low population density.

**Ecumene:** A feature of the maps of Canada by census division is the representation of the ecumene, or inhabited area, of Canada. The ecumene limit shown is an approximate delineation of the continuously inhabited area and other concentrations of more than 5,000 population.

Six census divisions do not appear within the ecumene portrayed on the map; they are Census Division No. 23 in Manitoba, Central Coast and Stikine in British Columbia, and Baffin, Keewatin and Inuvik in Northwest Territories. Consequently the mother tongue data for these census divisions are not shown on the maps but are given in the tables.

**SAMPLING AND WEIGHTING**

The information in this report was collected on a 100% basis and as such represents the official census counts. All table headings are noted accordingly.

**DÉFINITIONS — fin**

**Catégorie de subdivision de recensement:** Les subdivisions de recensement sont classées en diverses catégories selon les appellations adoptées par les autorités provinciales ou fédérales. À l'exception des territoires non municipalisés et des réserves indiennes, la catégorie indique le statut d'une subdivision de recensement. Voici la liste des abréviations des catégories de subdivision de recensement les plus courantes:

**Réserve indienne:** Territoire, le plus souvent rural et de taille variable, qui appartient à une tribu indienne en vertu de traités conclus entre le gouvernement fédéral et les Indiens. Il échappe à la compétence des autorités locales et est administré par le ministère des Affaires indiennes et du Nord canadien.

**Territoire non municipalisé:** Région sans organisation municipale, administrée directement par la province ou, le cas échéant, par le comté. Ces régions sont généralement caractérisées par leur vaste étendue et par la faible densité de leur population.

**Écoumène:** L'une des caractéristiques des cartes du Canada par division de recensement est de représenter l'écoumène, c'est-à-dire la superficie habitée du Canada. Les limites indiquées font ressortir de façon approximative la région habitée en continu et les autres concentrations de plus de 5,000 habitants.

Six divisions de recensement ne sont pas représentées à l'intérieur de l'écoumène; ce sont la division de recensement n° 23 du Manitoba, Central Coast et Stikine en Colombie-Britannique, Baffin, Keewatin et Inuvik dans les Territoires du Nord-Ouest. Par conséquent les données sur les langues maternelles pour ces divisions de recensement ne sont pas montrées sur les cartes mais sont disponibles dans les tableaux.

**ÉCHANTILLONNAGE ET PONDÉRATION**

Les renseignements de la présente publication ont été recueillis à 100 % et représentent les chiffres officiels de recensement. Les titres des tableaux sont annotés en conséquence.

## CONFIDENTIALITY AND RANDOM ROUNDING

The figures shown in this report have been subjected to a confidentiality procedure known as "random rounding" to prevent the possibility of associating small figures with any identifiable individual. Under this method, all figures including totals are randomly rounded (either up or down) to a multiple of "5". This technique provides strong protection against direct, residual or negative disclosures without adding significant error to the census data. However, since totals are independently rounded they do not necessarily equal the sum of individual rounded figures in distributions. Also, minor differences can be expected for corresponding totals and cell values in various census reports. Similarly, percentages, which are calculated on rounded figures, do not necessarily add to the total. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data. Users are advised that each table is noted accordingly. Additional details on the random rounding technique may be obtained by writing to the Census User Inquiry Service, Statistics Canada, Ottawa K1A 0T7.

## BASIC MEASURES OF DATA QUALITY

### Coverage Error

A coverage error occurs in the census whenever a person or a household is missed completely or counted more than once. Since overcoverage is fairly rare in relation to undercoverage, the net effect of such errors is to introduce a downward bias in census figures, so that the published census estimates tend to underestimate the actual population.

A special study was undertaken in relation to the 1976 Census to measure the extent of the bias due to undercoverage. This study estimated the over-all undercoverage rate to be of the order of 2% of the total population.

Evidence from studies of coverage errors in earlier censuses indicates that undercoverage is not evenly distributed throughout the population but tends to be higher in certain segments of the population, e.g., young male adults, recent immigrants.

Further details on this study may be obtained by contacting Census Information Services (see back cover).

## CONFIDENTIALITÉ ET ARRONDISSEMENT ALÉATOIRE

Par souci de confidentialité, les chiffres présentés ici ont été soumis à une formule appelée "arrondissement aléatoire" qui interdit la possibilité d'associer des chiffres de faible importance à une personne reconnaissable. Grâce à cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) à un multiple de "5". Cette technique assure une bonne protection contre la divulgation directe, négative ou par recoupements, sans ajouter d'erreur significative aux données. Toutefois, puisque les totaux sont arrondis séparément, ils ne sont pas nécessairement égaux à la somme des chiffres individuels arrondis dans les distributions. De plus, il faut s'attendre que les totaux et les autres chiffres correspondants dans divers bulletins du recensement présentent quelques légères différences. De même, la somme des pourcentages qui sont calculés à partir des chiffres arrondis ne correspond pas forcément au total. La plupart des répartitions en pourcentage et des taux sont basés sur des données arrondies, alors que les variations en pourcentage et les moyennes sont fondées sur des données non arrondies. Les utilisateurs sont priés de remarquer que chaque tableau est annoté en conséquence. On peut obtenir plus de détails sur l'arrondissement aléatoire en s'adressant au Service-utilisateurs (recensement), Statistique Canada, Ottawa K1A 0T7.

## MESURES DE BASE DE LA QUALITÉ DES DONNÉES

### Erreur de couverture

Une erreur de couverture se glisse chaque fois qu'une personne ou un ménage sont omis ou comptés plus d'une fois. Étant donné que le surdénombrement est assez rare par rapport au sous-dénombrement, les erreurs de couverture introduisent un biais vers le bas dans les estimations du recensement de sorte que ces dernières ont tendance à sous-représenter la population réelle.

On a mené une étude spéciale concernant le recensement de 1976 afin de mesurer l'importance des biais attribuables au sous-dénombrement. On a estimé que le taux global du sous-dénombrement représentait 2 % de la population totale.

Des études d'erreurs de couverture effectuées à l'occasion de recensements antérieurs ont révélé que le taux de sous-dénombrement n'était pas également réparti dans toute la population, mais qu'il avait tendance à être plus élevé pour certains segments de la population, par exemple, chez les jeunes adultes de sexe masculin et les nouveaux immigrants.

On peut obtenir de plus amples renseignements sur cette étude en communiquant avec Information recensement (voir la couverture arrière).

## BASIC MEASURES OF DATA QUALITY — Continued

## Response Rates

The table below presents the response rates obtained in the 1976 Census for the stated characteristics. A response rate is defined as the number of times the value of the characteristic was obtained divided by the number of times it should have been obtained.

These response rates are published in order to give an indication, for each characteristic, of the proportion of cases which required imputation for non-response.

## MESURES DE BASE DE LA QUALITÉ DES DONNÉES — suite

## Taux de réponse

Le tableau ci-dessous présente les taux de réponse obtenus lors du recensement de 1976 relativement aux caractéristiques citées. Le taux de réponse est égal au quotient du nombre de fois que la valeur de la caractéristique a été obtenue par le nombre de fois qu'on aurait dû l'obtenir.

Ces taux de réponse sont publiés afin d'indiquer, pour chaque caractéristique, le pourcentage de cas qui ont dû être imputés en raison de la non-réponse.

RESPONSE RATES FOR SELECTED CENSUS CHARACTERISTICS, 1976  
TAUX DE RÉPONSE POUR CERTAINES CARACTÉRISTIQUES DU RECENSEMENT, 1976

Characteristics — Caractéristiques	Response rate (%) — Taux de réponse (%)
Mother tongue — Langue maternelle .....	98.1 <sup>1</sup>

<sup>1</sup> As imputation for non-response was not carried out for mother tongue, the response rate for mother tongue is the percentage of persons in the given language categories excluding the "not stated" category. — Comme nous n'avons pas procédé à l'imputation dans le cas des non-réponses attribuables à la langue maternelle, le taux de réponse relatif à cette question est égal au pourcentage de personnes faisant partie des catégories données sur la langue à l'exception de la catégorie "non déclaré".

## Total Standard Error

The measures of reliability given in the table below are estimates of the total standard error (TSE) of the published 1976 Census figures. These include the effects of sampling (where applicable) as well as the random or non-systematic components of response and processing errors. The total standard errors, however, do not include allowances for systematic errors such as coverage errors, biases due to similar misinterpretations of concepts by many respondents, or systematic processing errors. These estimates of reliability are published to give an indication of the level of error only and are not meant for use in hypothesis testing or detailed analysis.

Users wishing to obtain TSE estimates for a given cell of data in any table in the Volume Series should follow these procedures:

1. Determine if the table is based on the complete census or on the one-third sample.
2. Determine the categories defining the cell. In some cases, this may be just a single category (e.g., age 25-29), while for a cell in a cross-classification involving several variables, there may be several categories (e.g., married males aged 25-29).
3. Referring to the TSE table locate the cell-defining category which presents the highest value. Any column can be used for this comparison. For those categories where both 100% and sample TSE values are shown, use only the 100% rows for tables based on the complete census and only the sample rows for tables based on the one-third sample (see step 1).

## Erreur type totale

Les mesures de fiabilité du tableau ci-dessous constituent des estimations de l'erreur type totale (ETT) des chiffres publiés du recensement de 1976. L'erreur type totale englobe les effets de l'échantillonnage (s'il y a lieu) ainsi que les composantes aléatoires et non systématiques des erreurs de réponse et de dépouillement. Cependant, l'erreur type totale ne comprend pas les erreurs systématiques telles que les erreurs de couverture, les biais découlant d'une mauvaise compréhension des concepts par plusieurs recensés et les erreurs systématiques de dépouillement. Ces estimations de fiabilité sont présentées uniquement pour donner une indication du niveau d'erreur dans les chiffres du recensement et ne doivent pas être utilisées pour faire des tests d'hypothèses ou effectuer une analyse détaillée.

Les lecteurs qui veulent calculer des estimations de l'ETT pour une case donnée d'un tableau quelconque de cette série devront procéder de la façon suivante:

1. Déterminer si le tableau est fondé sur le recensement exhaustif ou sur l'échantillon partiel (un tiers).
2. Déterminer les catégories qui définissent la case. Dans certains cas, il peut n'y avoir qu'une seule catégorie (par exemple, les 25-29 ans), tandis que dans le cas des classements recoupés mettant en jeu plusieurs variables, il peut y en avoir plusieurs (par exemple, les hommes mariés âgés de 25 à 29 ans).
3. En consultant le tableau des ETT, situer la catégorie qui a la valeur la plus élevée. N'importe quelle colonne peut servir à cette comparaison. Dans le cas des catégories pour lesquelles sont indiquées les valeurs de l'ETT à la fois pour le recensement exhaustif et pour l'échantillon, utiliser uniquement les lignes du recensement pour les tableaux fondés sur le recensement exhaustif, et uniquement les lignes de l'échantillon pour les tableaux fondés sur l'échantillon d'un tiers des ménages (voir l'étape 1).

**BASIC MEASURES OF DATA QUALITY — Concluded**

4. Choose the column in the TSE table whose heading is closest to the value of the given cell in the census table. Approximations for intermediate values may be achieved by linear interpolation.
5. Read off the figure from the row (determined in step 3) and column (determined in step 4) of the TSE table.

When using these figures, the user can be reasonably certain that, for the enumerated population, the true value (discounting systematic and coverage errors) lies within plus or minus twice the total standard error (e.g., for a figure of 100 with a hypothetical TSE of 3, the range would be  $100 \pm 6$ ) and virtually certain that it lies within plus or minus three times the total standard error (e.g., for the same figure of 100 with a hypothetical TSE of 3, the range would be  $100 \pm 9$ ).

**MESURES DE BASE DE LA QUALITÉ DES DONNÉES — fin**

4. Dans le tableau des ETT, choisir la colonne dont l'en-tête se rapproche le plus de celle de la case donnée dans le tableau du recensement. Les approximations des valeurs intermédiaires peuvent être effectuées par interpolation linéaire.
5. Lire la valeur correspondant à la ligne (déterminée à l'étape 3) et à la colonne (déterminée à l'étape 4) du tableau des ETT.

L'utilisateur de ces chiffres peut être raisonnablement certain que, pour la population recensée, la vraie valeur (en faisant abstraction des erreurs systématiques et de couverture) se situe dans un intervalle de plus ou moins deux fois l'erreur type totale (par exemple, pour le chiffre 100 et une ETT hypothétique de 3, l'intervalle serait de  $100 \pm 6$ ). L'utilisateur peut être presque certain que cette valeur se situe dans un intervalle de plus ou moins trois fois l'erreur type totale (par exemple, pour le chiffre 100 et une ETT hypothétique de 3, l'intervalle serait de  $100 \pm 9$ ).

**TOTAL STANDARD ERROR ESTIMATES<sup>1</sup> FOR SELECTED CENSUS CHARACTERISTICS, 1976**  
**ESTIMATIONS DE L'ERREUR TYPE TOTALE<sup>1</sup> DE CERTAINES CARACTÉRISTIQUES DU RECENSEMENT, 1976**

Characteristics — Caractéristiques	Size of census figure — Taille du chiffre du recensement													Million — Million(s)			
	50	100	200	500	1,000	2,000	5,000	10,000	20,000	50,000	100,000	500,000	1	2	5	10	
Mother tongue — Langue maternelle:																	
English — Anglais.....	8	12	17	26	37	53	83	117	166	263	372	831	1,175	1,661	2,627	3,715	
French — Français.....	8	12	17	27	38	53	84	119	169	267	377	844	1,193	1,687	2,668	...	
Other <sup>2</sup> — Autres <sup>2</sup> .....	13	19	27	42	60	85	134	190	268	424	600	1,342	1,898	2,684	...	...	

<sup>1</sup> These correspond to the reliability measures that were presented as root mean square errors or reliability estimates in the 1971 Census publications. — Ces estimations correspondent aux mesures de fiabilité présentées comme écarts quadratiques moyens ou estimations de fiabilité dans les publications du recensement de 1971.

<sup>2</sup> To be used for the single category defined as all mother tongues, other than English, French and Not stated. — Doit être utilisé pour la catégorie définie comme l'ensemble de toutes les langues maternelles autres que l'anglais, le français et les non-déclarés.

**SYMBOLS**

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

--- amount too small to be expressed.

\* designates census subdivisions or federal electoral districts with a mother tongue minority of 10% or more (see Text).

**SIGNES CONVENTIONNELS**

.. non disponible.

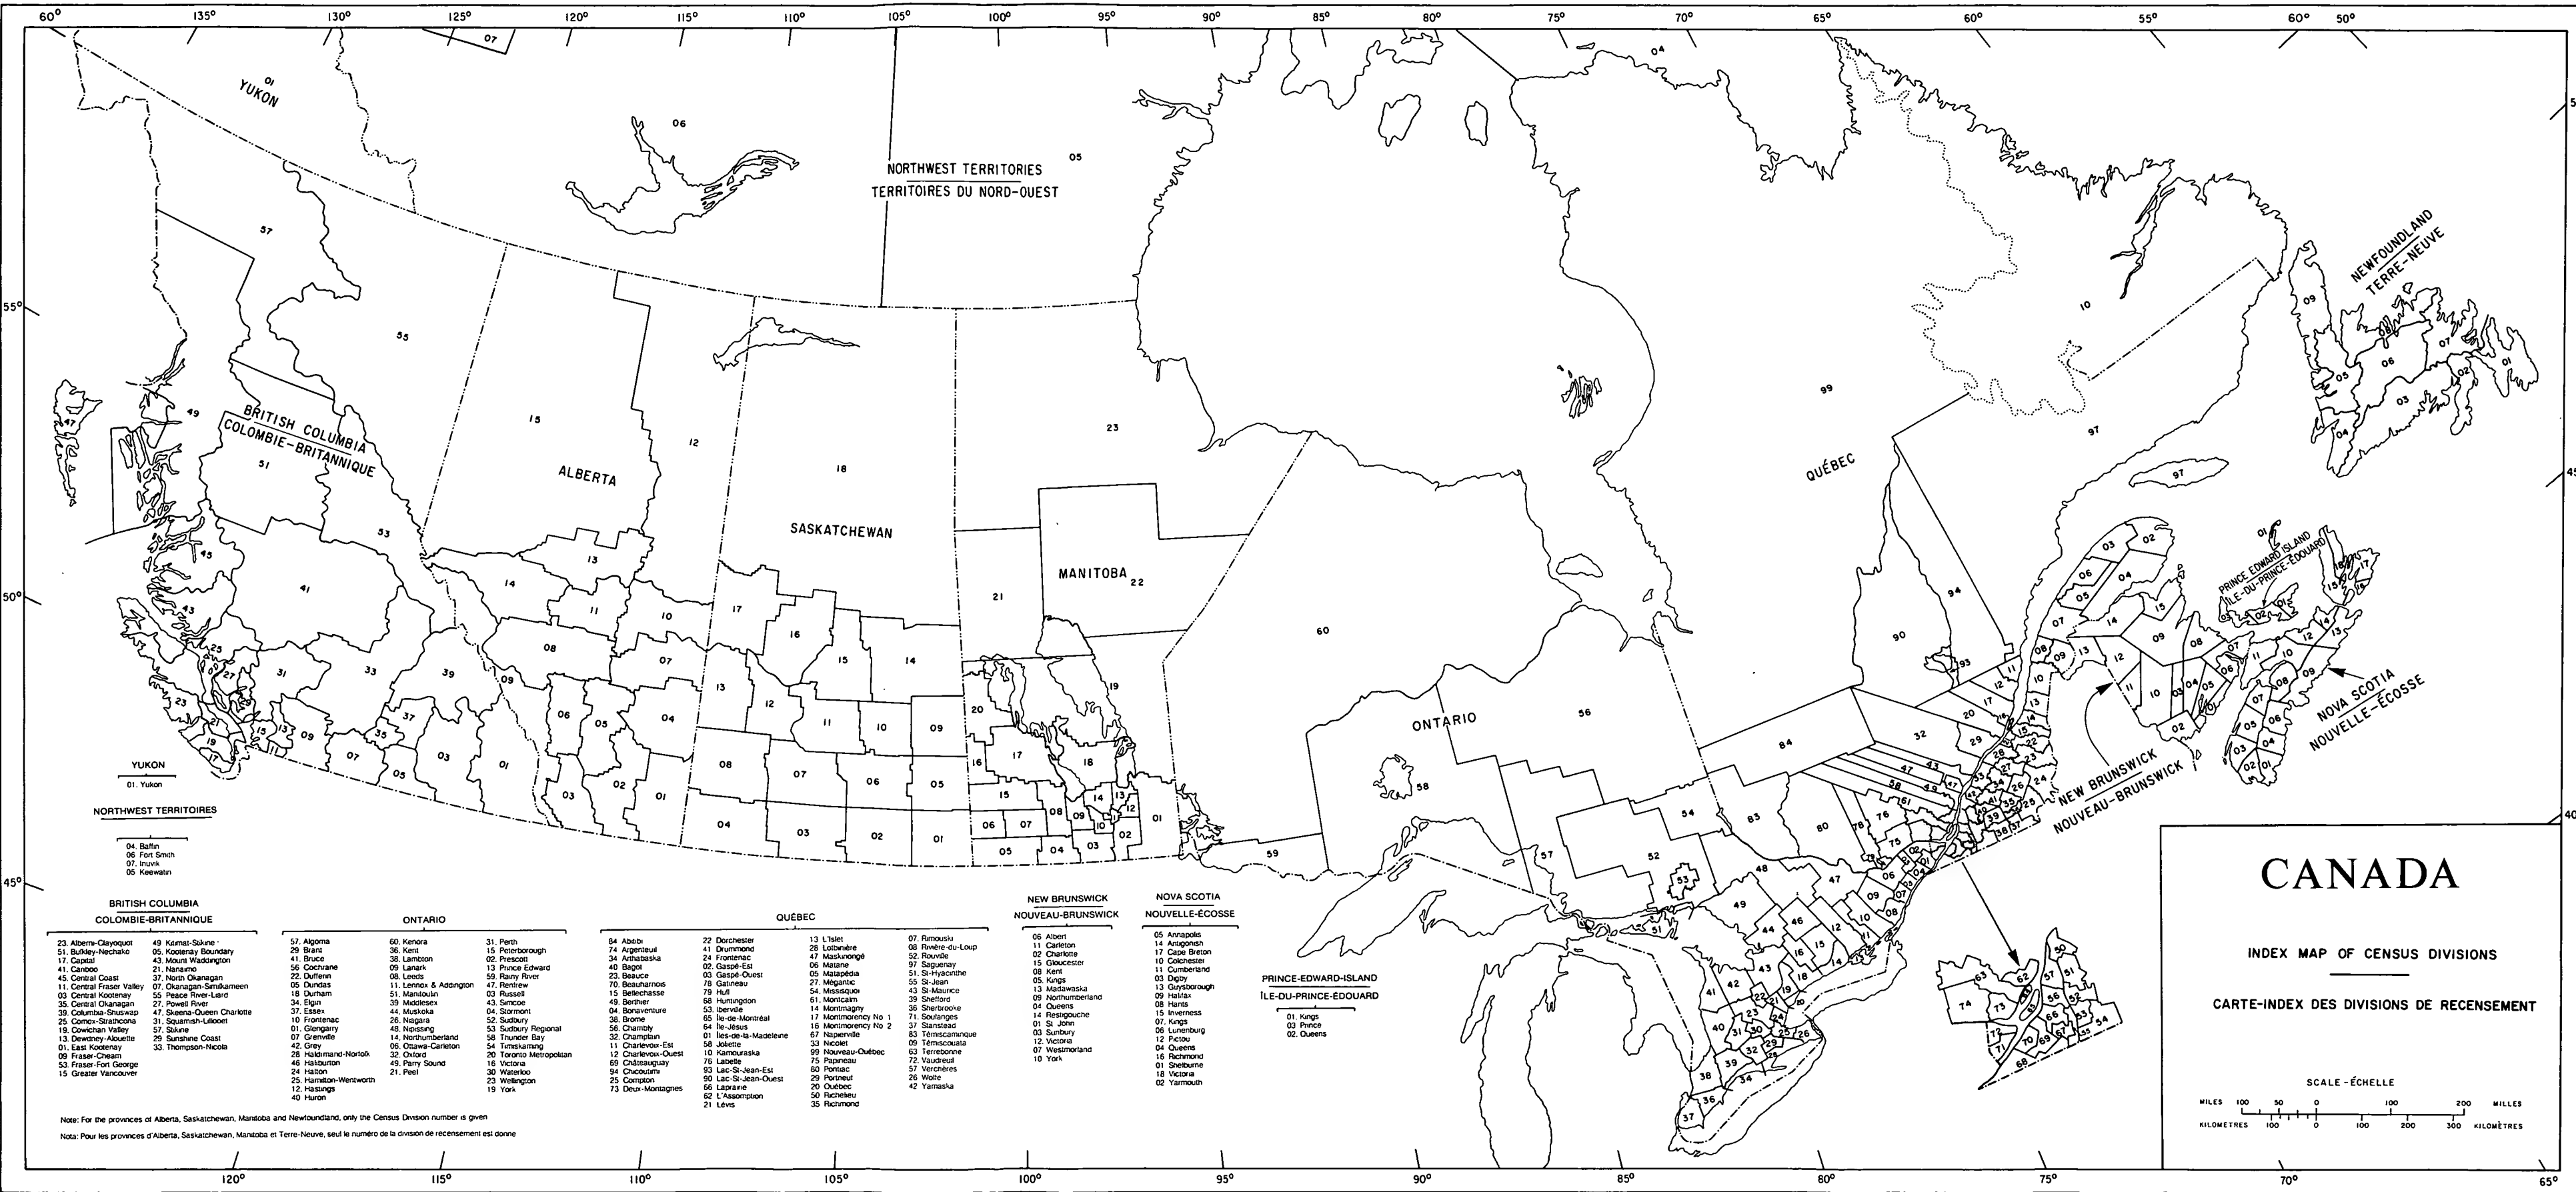

... n'ayant pas lieu de figurer.

- néant ou zéro.

--- infimes.

\* désigne les subdivisions de recensement ou les circonscriptions électorales fédérales où le groupe linguistique minoritaire représente 10 % ou plus de la population totale (voir le texte).

Note: For the provinces of Alberta, Saskatchewan, Manitoba and Newfoundland, only the Census Division number is given  
Nota: Pour les provinces d'Alberta, Saskatchewan, Manitoba et Terre-Neuve, seul le numéro de la division de recensement est donné

## Publications of the 1976 Census of Canada

This bulletin is one of a series of volume reports of the 1976 Censuses of Population, Housing and Agriculture.

Most of the bulletins in the regular Volume Series are data-oriented. Other reports containing more methodological, interpretative and evaluative content, are also issued. These are as follows:<sup>1</sup>

- (a) 1976 Census Administrative Report
- (b) 1976 Census Quality of Data Series
- (c) 1976 Census Research Series
- (d) Introductory Reports to each of the regular Volume Series.

Also available on request is a series of Reference Lists developed largely for internal verification of basic geographical and population hierarchies, which could provide useful information to the outside user.

Users will note that the majority of census publications are colour-coded to identify with the four themes central to the presentation and to maintain comparability with the 1971 series, e.g., blue for Geographical and Demographic content, brown for Housing, Household and Family data, red for Economic Characteristics and gold for the series based on Agriculture.

These reports are listed in the *1976 Census Catalogue* which can be obtained free of charge from:

Publications Distribution,  
Room 1200, Statistics Canada,  
Ottawa, Ontario.  
K1A 0T6

To order **census publications**, send a cheque or money order made payable to the Receiver General for Canada, to the above address.

In addition to published documents, the Census of Canada can provide **other products and services** about census: data on microform (film or fiche), computer tapes, computer print-outs, user-specified tables, maps, geographic files, geographic lists, etc.

For information write:

Census Information Services,  
Statistics Canada,  
Ottawa, Ontario.  
K1A 0T7

or call (613) 996-5254.

**Inquiries** about census and other **Statistics Canada information** can also be directed to Statistics Canada Regional Offices located in: St. John's (Nfld.), Halifax, Montréal, Ottawa, Toronto, Winnipeg, Regina, Edmonton and Vancouver.

<sup>1</sup> It should be noted that these publications are generally released somewhat later than the data reports.

## Publications du recensement du Canada de 1976

Ce bulletin fait partie de la série des publications des recensements de 1976 de la population, du logement et de l'agriculture.

La plupart des bulletins de la série ordinaire des volumes présentent des données. On publie également d'autres bulletins dont le contenu vise plutôt la méthodologie, l'interprétation et l'évaluation. Ces bulletins sont les suivants<sup>1</sup>:

- a) Rapport administratif du recensement de 1976
- b) Série relative à la qualité des données du recensement de 1976
- c) Série du recensement de 1976 relative à la recherche
- d) Introductions à chacune des séries ordinaires des volumes.

Vous pouvez aussi vous procurer sur demande une série de Listes de référence, servant surtout à la vérification interne des catégories géographiques et démographiques de base, qui pourraient fournir des renseignements utiles aux utilisateurs à l'extérieur de Statistique Canada.

Les utilisateurs constateront que la plupart des publications du recensement sont classées par couleur, chaque couleur correspondant à l'un des quatre thèmes du recensement; cela permet d'assurer la comparabilité avec les séries de 1971; ainsi, le bleu est réservé aux publications de nature géographique et démographique, le brun, aux bulletins sur le logement, les ménages et les familles, le rouge, aux publications de nature économique et la couleur or, à la série relative à l'agriculture.

Ces bulletins figurent au *Catalogue du recensement de 1976* que vous pouvez obtenir gratuitement auprès de:

Distribution des publications  
Pièce 1200, Statistique Canada  
Ottawa (Ontario)  
K1A 0T6

Envoyez vos commandes de **publications du recensement** à cette même adresse en y joignant un chèque ou un mandat postal à l'ordre du Receveur général du Canada.

Outre les publications, le Recensement du Canada offre divers **autres produits et services**: données en microcopie (film ou fiche), bandes pour ordinateurs, états mécanographiés, totalisations spéciales, cartes, fichiers et listes géographiques, etc.

Pour obtenir des renseignements, écrivez à:

Information recensement  
Statistique Canada  
Ottawa (Ontario)  
K1A 0T7

ou téléphonez au numéro (613) 996-5254.

Toute **demande de renseignement** sur le recensement et les autres **données de Statistique Canada** peut également être transmise aux bureaux régionaux de Statistique Canada situés à St. John's (T.-N.), Halifax, Montréal, Ottawa, Toronto, Winnipeg, Regina, Edmonton et Vancouver.

<sup>1</sup> Il convient de remarquer que ces bulletins sont généralement publiés quelque temps après les bulletins présentant des données.
